

RAIMBEAUCOURT LIBRARY

A WELCOMING COMMUNITY SPACE
FOR THE CITY OF RAIMBEAUCOURT

Access to culture for all is essential for the community. Having a friendly space bringing together different cultures was the wish of the city of Raimbeaucourt in France. This is why the multi-welcome space was created in 2023 where a library, a digital museum, and a music school meet.

A new building for a new library.

This multi-functional space is in a brand new building, surrounded by beautiful gardens and scenery. A place where it is now possible to come and get a book after work, browse on a computer, or to sit in a comfortable seat and enjoy your afternoon tea.

Julie Sticker, Head of the Cultural Centre of the city of Raimbeaucourt said:

«We wanted to make culture accessible to all in a friendly environment, for the people of Raimbeaucourt, but also for outside visitors»

A space where different people meet, which was not necessarily the case before.

«The service is completely new, there was no library before, and the change in the community is amazing to see.»

The head of the youth centre was facing a real challenge as they had to plan and design this library space without any past experience. This is why WF Education Group was asked to provide support and experience.

Designed by
WF Education

WF Education's expert design team helped them imagine, plan and create their new library! The library included the installation of shelving, dens, seating, displayers, and much more.

We also created dedicated zones for teenagers and children to read and hang out in. We made sure that the design reflected the aesthetic they wanted for their space.

The library of Raimbeaucourt is composed of a corner for teenagers using our Everna™ teen reading range. The double alcove seating allows young people to sit comfortably in this dedicated space to read and relax. The angled shelves make it possible to highlight the books front cover in order to encourage spontaneous reading. The dedicated space is embellished with a few loose seats as well as spinners on wheels and comic bins nearby. Teenagers can find all their favourite books at their fingertips.

In addition, the shelving along the walls are from our Cantilibra™ shelving range. Fixed or mobile, they make it possible to rearrange the space very easily thanks to the casters.

The people of Raimbeaucourt can now access culture and innovation with the digital museum and the virtual reality space.

Thanks to the cultural mediator of Raimbeaucourt, users can access the various works of art by theme or try the VR headsets for total immersion. A true technological innovation appreciated by users, but especially younger audiences.

«Teenagers love this device and can escape for a little while. They are on board a roller coaster or on top of Mont Blanc thanks to virtual reality headsets.»
